

# Can your A/C keep up with the heat?

**Get ready for the upcoming intense summer temperatures by supplementing your existing A/C with room-by-room cooling solutions from Mitsubishi Electric.**

Conventional air conditioners are sized to handle average temperatures at the time of installation. Unfortunately, this means many people are starting to see that their A/C can't keep up with the soaring temperatures of today.

**Don't get caught without cooling when you need it most.**

## Key Benefits

### The Mitsubishi Electric Difference

Each unit is designed to meet Mitsubishi Electric's rigorous quality and reliability standards, and when installed by a Diamond Contractor or Ductless Pro, comes with a 12-year factory warranty.

### Cooling Where You Need It

One outdoor unit can connect up to eight easy-to-install indoor units for personalized, room-by-room comfort. Cool only the rooms you are using.

### Quiet Comfort

High performance that's whisper-quiet with advanced features that eliminate the noise of traditional systems.

### Generator Compatible

All-electric heat pumps can run off of generators during rough weather and power outages.

With Federal Tax credits of up to \$2,000\* and local utility rebates available on qualified models of all-electric heat pumps, there are more incentives than ever for upgrading your system.

\*Federal income tax credit available to U.S. homeowners only for qualifying heat pump models. Terms and conditions for tax credit are dependent on federal and state laws and regulations and are subject to change. Contact your tax advisor for further requirements and to confirm eligibility for tax credits.
